Inondation de pièces à vivre

Inondation de sous-sol / bâtiment / garage

Inondation de jardins / accès

Inondation / ruissellement sur voirie

Inondation d'eau

Axe important

Axe secondaire / chemin

The map displays the commune of Ouézy, France, with its municipal boundary highlighted in a thick blue line. The background is a grayscale aerial photograph. The map is overlaid with various hydraulic and planning information:

- Water Flow:** Blue lines indicate the main water course (solid) and secondary/temporary courses (dashed). Arrows on these lines show the direction of flow. A network of smaller blue lines with cross-ticks represents the drainage system.
- Flood Zones:** Different shades of green and yellow indicate various levels of flood risk or water accumulation, particularly in the central and southern parts of the commune.
- Infrastructure:** Roads are shown as thin gray lines. A prominent black rectangle in the center represents a large industrial or commercial building. Other smaller buildings are visible in the central village area.
- Geographical Labels:** Several locations are labeled in French: "Douet Lambert" (top left), "Le Village du Bourg" (top center), "La Bruyère d'Ouézy" (top right), "Père Chaudet" (middle right), "Le Lignon" (center), "Le Dignat" (bottom center), "Le Val d'Ouézy" (bottom left), "Les Bas Querquents" (bottom center-left), "Belle des Plantes" (bottom center-right), and "Le Clos Saint-Pierre" (bottom right).
- Legend:** A detailed legend is located in the top left corner, defining the symbols for water courses, drainage, flood zones, and infrastructure. It includes a scale bar (0 to 380 meters) and a north arrow.
